

# Estrumate

Drug:

Cloprostenol sodium

Uses:

For intramuscular use to induce luteolysis in beef and dairy cattle. The luteolytic action of Estrumate can be utilized to manipulate the estrous cycle to better fit certain management practices, to terminate pregnancies resulting from mismatings, and to treat certain conditions associated with prolonged luteal function.

Dosage:

2mL

Frequency:

As directed

Route:

This drug is labeled for Intramuscular (IM) injection

Duration:

Dose may be repeated as indicated

Withhold:

Milk 0 Days

Meat 0 Days

Special Considerations: Women of child-bearing age, asthmatics, and persons with bronchial and other respiratory problems should exercise extreme caution when handling this product. In the early stages, women may be unaware of their pregnancies. ESTRUMATE® is readily absorbed through the skin and may cause abortion and/or bronchospasms; direct contact with the skin should therefore be avoided. Accidental spillage on the skin should be washed off immediately with soap and water.
