

# Lutalyse

Drug:

Dinoprost tromethamine injection

Uses:

For estrus synchronization, treatment of unobserved (silent) estrus and pyometra (chronic endometritis) in cattle; for abortion of feedlot and other non-lactating cattle; for parturition induction in swine; and for controlling the timing of estrus in estrous cycling mares and clinically anestrous mares that have a corpus luteum.

Dosage:

5mL in cattle. See additional labeling information for dosage in horses or swine

Frequency:

As directed or according to reproductive program protocol

Route:

This drug is labeled for Intramuscular (IM) injection

Duration:

Dose may be repeated as indicated

Withhold:

Milk 0 Days

Meat 0 Days

Additional precautions:

Not for human use. Women of childbearing age, asthmatics, and persons with bronchial and other respiratory problems should exercise **extreme caution** when handling this product. In the early stages, women may be unaware of their pregnancies. Dinoprost tromethamine is readily absorbed through the skin and can cause abortion and/or bronchospasms. Accidental spillage on the skin should be washed off immediately with soap and water.
